SIGLENT Technologies exhibits at 2018 ASEE

July 02, 2018

SIGLENT NA team members Steve Barfield and Jason Chonko attended the American Society for Engineering Education (ASEE) conference, held June 24-27, in Salt Lake City, the only show dedicated to Engineering Education in the USA. While at the show, we had the pleasure of introducing the new SVA1015X Spectrum and Vector Network Analyzer as well as the $1500 education bundle that includes the SDS1202X-E oscilloscope, SPD3303-C power supply, SDM3045X DMM, and SDG1032X function generator.

The SIGLENT SVA1000X series spectrum & vector network analyzers are powerful and flexible tools for broadcast and RF device testing. With a wide frequency range from 9 kHz to 1.5 GHz, the analyzer delivers reliable automatic measurements and plenty of features including a tracking generator and multiple modes of operation: the base model is a swept super-heterodyne spectrum analyzer and optional functions include a vector network analyzer (S11, S21), a Frequency Domain Reflectometry based distance-to-fault locator, and a modulation analyzer. Applications include broadcast monitoring/evaluation, site surveying, EMI pre-compliance,research and development, education, production and maintenance.
